Stossier. A brand of Milteco.

CRATE EMPTIER

GKE

Benefits

- Simple operation and cleaning
- Plug-in ready machine
- Suitable for all typical large crates
- Safe two-handed operation
- Stepless tipping process
- Dosing pusher
- Hydraulic unit completely covered
- Minimal maintenance required
- Customer-specific designs possible
- Machine made of stainless steel
- CE-certified

General

The crate emptier from Valentin Stossier can empty all typical large crates (L x W x H = 1200 x 1000–1200 x 760–1000mm). With a height-adjustable stop tube, the crate emptier is adjusted to the crate height.

The full crate is loaded into the crate emptier with a pallet jack or a forklift. Upon pressing of the button “UP” or

“DOWN” along with another button for two-handed operation (machine safety), the crate is tipped for emptying or tilted back into the original position.

Once either of the two buttons is released, the crate emptier remains stopped in its current position. The adjustable dosing pusher allows dosing of the fruit quantity during tipping. This is necessary when full crates are tipped

into the upper end position so that the fruit can slide down on its own.

The tipping heights of the crate emptier from Valentin Stossier can be individually adapted to customer-specific requirements.
